

PAVEMENT CONDITION INDEX

CITY OF GARLAND STREET DEPARTMENT

0-100

The Pavement Condition Index is a numerical rating from 0-100. The number represents the percentage of the pavement that does not have defects.

HOW DO WE USE PCI TO PRIORITIZE STREETS FOR OVERLAY, PARTIAL REPAIRS OR FULL RECONSTRUCTION?

20-69 PCI are candidates for overlay. To be overlayed, the curbs, gutters and sidewalks should be in good condition.

70 PCI and above qualifies for partial repair. The isolated failed sections of pavement are removed and replaced.

0-30 are candidates for full reconstruction and should be reconstructed as funding permits.

DID YOU KNOW?

Every three years, the Street Department develops an infrastructure construction program. The PCI is used as the basis to develop the program, which consists of the street and alley reconstruction, repair and overlay projects for the upcoming three years.
